Application for Student Assistant Position in Center for Counter-Terror Operations (KTO)

Dear Hiring Team at PET,

I am writing to express my strong interest in the Student Assistant position within the Center for Counter-Terror Operations (KTO) at PET. As a Master's student in Computer Science at DTU with professional background as a software developer, I am deeply motivated by the opportunity to apply my systematic data processing skills, analytical mindset, and report-writing discipline to support PET's vital intelligence and security mission.

Prior to starting my Master's degree at DTU, I worked for a couple of years as a software developer at companies including GE Healthcare and Swiss Re. In those roles, my day-to-day work revolved around handling multi-source data, validating information accuracy, parsing structured logs, and documenting technical workflows. This experience trained me to work methodically, organize complex information logically, and deliver clear, structured documentation even under tight operational deadlines.

How my background aligns with KTO's analytical and data needs:

- **Systematic Data & Information Processing:** Strong IT background in processing structured and unstructured data, organizing multi-source inputs, and maintaining data integrity.
- **Structured & Precise Writing:** Proven experience writing clear, accurate technical summaries and documentation that translate complex technical details into accessible reports.
- **Calm Under Pressure & Short Deadlines:** Experienced in handling ad-hoc requests and maintaining high accuracy when deliverables are required on short notice.

Although my academic background is in Computer Science and Software Engineering rather than social sciences, I believe this technical foundation brings a valuable perspective to data-intensive intelligence gathering and analysis. I adapt quickly to new IT systems and software tools, and I enjoy the process of gathering raw information, synthesizing key insights, and presenting them clearly for decision-making.

I thrive in collaborative, informal environments where team members support one another while maintaining the highest standards of professional seriousness and confidentiality. I fully understand and respect the requirement for discretion and security clearance associated with working at PET.

Thank you for considering my application. I would welcome the opportunity to discuss in an interview how my technical skills and systematic approach can contribute to the team at KTO.

Best regards,

Raviteja Maddela
