

Application for Student Assistant in AI & Automation

I am studying MSc Computer Science at DTU and I was really excited to read your job posting for Nordic Well Group—especially your note asking to see real projects, GitHub links, and automation process rather than a traditional cover letter! I am very eager to join your digital team in Nordhavn to build practical AI workflows and automation tools.

My Thoughts & Process in Building Automations:

When automating a manual task or building an AI tool, my first step is always to break down the manual workflow into clear logic, API contracts, and data inputs. For example, in my recent projects I have built:

- 1. Weather Route Safety Automation:** Automated real-time weather API integration that fetches route coordinates, checks road conditions along waypoints, and dynamically flags hazards.
- 2. Sparse MoE-QLoRA RAG System:** Built an AI retrieval pipeline with LLM tool-calling capability to parse documents and return exact answers with zero hallucination.
- 3. Clinical Data Extraction Pipeline:** Wrote Python & SQL scripts to clean, structure, and model unstructured medical notes using BioClinicalBERT models.

With my prior software engineering experience in healthcare and finance, I am comfortable writing clean Python, integrating REST APIs, writing LLM prompts, and documenting solutions so others can maintain them. Working ~12 hours per week with flexible scheduling fits perfectly alongside my studies at DTU.

You can view my live projects, GitHub code repos, and CV directly on my portfolio:
