

Application for Student Assistant Position — Center for Counter-Terror Operations (KTO), PET

Dear Hiring Team at PET,

I am writing to apply for the student assistant position at the Center for Counter-Terror Operations (KTO). I am currently studying for my Master's degree in Computer Science at DTU. Working with data and information analysis for a national security organization like PET is something I would find deeply meaningful.

Before moving to Denmark for my studies at DTU, I worked for a couple of years as a software developer at companies like GE Healthcare and Swiss Re. In my daily work, I spent a lot of time working with data—reading logs from different systems, verifying that information was accurate, and writing technical reports for my team. That work taught me to be methodical and careful with details when handling large amounts of information.

Coming from a software background, I naturally approach tasks in a structured way. When information is coming from different places, I focus on organizing it clearly and making sure nothing gets missed. In my previous developer roles, we often had tight deadlines when systems had issues, so I am comfortable staying calm and working systematically when ad-hoc tasks come up on short notice.

I understand that working at PET requires a high degree of discretion and a security clearance process, which I am fully prepared for. I am eager to learn, contribute to the team in Søborg, and support KTO's analytical work.

Thank you for taking the time to read my application. I look forward to hearing from you.

Best regards,

Raviteja Maddela

MSc Student in Computer Science & Engineering, DTU
