

Application for Student Assistant in AI & Automation

I am studying MSc Computer Science at DTU and I was glad to read your job posting for Nordic Well Group—especially your note asking to see real projects, GitHub links, and practical work process. I am very interested in joining your digital team in Nordhavn as a Student Assistant.

My Background & Project Work:

Coming from a software development background in healthcare and finance, I am used to writing clean Python code, querying SQL databases, and working with APIs. In my academic studies at DTU and recent projects, I have worked with:

- 1. Weather Route Safety Tool:** Built a Python script integrating weather APIs to check road conditions along route coordinates.
- 2. Sparse MoE-QLoRA Study:** Academic research project exploring LLM fine-tuning and document retrieval methods.
- 3. Clinical Text Processing:** Used NLP and BioClinicalBERT models to extract and structure information from unstructured clinical text.

I enjoy automating repetitive tasks, connecting systems via REST APIs, and writing clean documentation so solutions are easy for teammates to maintain. Working approximately 12 hours a week with flexible scheduling fits well alongside my MSc studies at DTU.

You can view my personal and academic projects and CV on my portfolio:
