

Application for Student Assistant in AI & Automation

I am studying MSc Computer Science at DTU and I am very interested in the Student Assistant role in AI and Automation at Nordic Well Group in Nordhavn. Having a background in software development with prior experience in healthcare and finance, I am eager to help your team build practical AI workflows, API integrations, and internal automation tools.

In my recent academic and personal projects, I have worked extensively with Python, REST APIs, prompt engineering, and LLM agent tool-calling. Whether it is parsing data, automating repetitive manual tasks, or building backend integrations, I enjoy building simple and reliable tools that save time for team members.

I am motivated to join Nordic Well Group because you focus on solving real operational challenges with AI. Working approximately 12 hours a week with flexible arrangements fits perfectly alongside my MSc studies at DTU, allowing me to contribute to your digital team from day one.

You can view my recently done personal and academic projects and CV on my portfolio:
