

Why I am interested in this position

Coming from a software development background in healthcare and finance, I have seen firsthand how important clear system architecture and reliable documentation are when systems grow complex. At DTU, I am studying computer science, and I want to apply my skills to real-world infrastructure rather than just classroom examples.

Nordic RCC stands out to me because you coordinate critical power grid operations across Denmark, Norway, Sweden, and Finland. Helping your team map out architecture landscapes, maintain documentation quality, and support technology governance is work where I can add value immediately, while learning how enterprise architecture is handled across a large Nordic grid. The 10–15 hours a week schedule also fits well with my MSc coursework at DTU.

You can view my recently done personal and academic projects and CV on my portfolio:
