

Application for Student Assistant in AI & Automation

I am studying MSc Computer Science at DTU and I was glad to read your job posting for Nordic Well Group—especially your note asking to see real projects, GitHub links, and practical work process. I am very interested in joining your digital team in Nordhavn as a Student Assistant.

My Background & Portfolio Projects:

Coming from a software development background in healthcare and finance, I am used to writing clean Python/JavaScript code, querying SQL databases, and building API integrations. On my live portfolio, I showcase recent student and personal projects including:

- 1. Weather-Aware Route Planner:** Interactive web application built with JavaScript, Leaflet.js, and Mapbox that samples OpenWeatherMap API forecasts along trip waypoints.
- 2. Sparse MoE-QLoRA for Danish Legal QA:** Student research project testing 4-bit model quantization, expert adapter routing, and FAISS document retrieval on a single GPU.
- 3. Multi-Modal Clinical Phenotyping:** Machine learning project testing multimodal fusion between doctor notes and lab test features on MIMIC-IV using BioClinicalBERT and FastAPI.
- 4. Multi-Agent Hospital Path Solver:** Multi-agent pathfinding algorithm in Java developed for a DTU AI course (02285), coordinating agents to solve grid-world tasks without collisions.

I enjoy automating repetitive tasks, integrating APIs, and writing clear documentation so solutions are easy for teammates to maintain. Working approximately 12 hours a week with flexible scheduling fits well alongside my MSc studies at DTU.

You can view my projects, code repositories, and CV directly on my portfolio:
